

metadata.

Build your own Agentic GTM

Part 1

Build two pages for your
target companies.

Gil Allouche
CEO, Metadata

Booklet, full prompts and starter code included.

This is how I built Metadata's GTM motion

93

Demo requests

64

Booked demos

34

Completed demos

Company totals since August 17, measured September 30, 2026. This workflow's share is unverified.

Engine test: 10 emails confirmed in Gmail Sent. 10 repeat sends blocked.

First instruction. Run this in Codex, Claude Code or your terminal.

```
git clone https://github.com/f-o-x11/agent-gtm-workshop.git
```

Open the folder in local Codex or Claude Code. Keep the booklet and prompts.html open.

The workflow I run at Metadata

Today: create the account page. Save the instructions. Use them for a second company.

I'm Gil. I run Metadata.

Gil Allouche

CEO, Metadata.io

I built the workflow our marketing team uses.

I use Codex to run it.

Today, build two pages for your target companies.

Metadata's actual page for Zuora

Zuora: one page and two message drafts

EMAIL DRAFT / Not sent

May I send you campaign ideas for reaching Zuora's accounting, billing operations and finance systems buyers?

New workshop draft. No send claimed.

GIFT INVITATION DRAFT

A thank-you gift with a campaign-planning demo for Zuora.

Zuora / Actual account page

Not sent. Value, recipient and terms not selected.

Build these files for your own company

2. Set up your company

Company brief

4. Build and check page one

Reviewed HTML page

3. Choose two companies

Two target briefs

5. Save the skill. Build page two.

Saved instructions + second page

Use your own company and targets. No API keys needed for Part 1.

Open [Participant-Booklet.pdf](#) for instructions. Open [prompts.html](#) to copy each full prompt.

Section 2 of 5

Set up your company

- 1** Open your cloned project.
- 2** Paste the startup prompt.
- 3** Review the company brief.

COMPANY.md, saved setup and local rules.

24 minutes

Open **START-HERE**. Add your website once.

12 min / Easy / Local Codex or Claude Code; file and web access. No API credits.

- 1** Open your cloned folder in local Codex or Claude Code
- 2** Open **START-HERE.html** in your browser
- 3** Enter your website once. Copy the prompt as it is
- 4** Paste it into your local agent. Open **COMPANY.md**

You should have: COMPANY.md, SETUP.md, AUTHORITY.md and AGENTS.md

Check: Setup found a supported Python version; Sending and spending are paused; The agent stops and names the next task

Full prompt on the next page and at [prompts.html#p1-install](#)

Your first prompt: use **START-HERE.html**

- 1** Open START-HERE.html in your browser.
- 2** Enter your company website once.
- 3** Click Copy full prompt. Paste it as it is into local Codex or Claude Code.
- 4** Read COMPANY.md when the agent stops.

The helper fills the prompt. Your agent asks for missing business details.

Open START-HERE.html

Check your company facts, buyers and offer

8 min / Easy / Codex web access and your official website. No paid API required.

- 1** Read COMPANY.md. Check the buyer, offer and next-step link.
- 2** Open its proof sources. Resolve conflicting numbers or leave them out.
- 3** Confirm the brief. Use it for both account pages.

You should have: company-motion/COMPANY.md with sourced company facts

Check: Every proof claim has a supporting source; Buyer segment and offer match your answers; Conflicting website numbers are flagged, not silently selected

Full prompt on the next page and at [prompts.html#p1-company](#)

Prompt: Check your company facts, buyers and offer

Review company-motion/COMPANY.md with me.

Show the buyer segment, offer, next-step link and the source behind each proof claim.

If the website has conflicting numbers, show both URLs and exact excerpts. Do not choose a number without support.

Ask at most two short questions for missing company facts. Keep unsupported claims out of the brief.

Save my corrections and preserve the source URLs and read dates.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: review the operating instructions.

Copy full prompt: [prompts.html#p1-company](#)

Next: review the operating instructions (p1-authority)

Check the saved rules. Keep sending paused.

4 min / Easy / Prepared bootstrap and your saved company brief. No API.

- 1** Open AUTHORITY.md and AGENTS.md. Your local rules and sending limits.
- 2** Confirm sending and spending are paused
- 3** Ask your agent to repair either missing file. Keep the existing company brief.

You should have: Present, readable AUTHORITY.md and AGENTS.md

Check: Both files exist; No outreach, sender, spend or country authority is invented

Full prompt on the next page and at [prompts.html#p1-authority](#)

Prompt: Check the saved rules. Keep sending paused.

Open company-motion/AUTHORITY.md and company-motion/AGENTS.md.

If either is missing, rerun:

```
python3 -B gtm.py bootstrap --company-brief ../company-motion/COMPANY.md
```

Preserve my existing facts, instructions and history.

Show the company name, one-step-at-a-time rule, and paused outreach and spending rules.

If either file conflicts with my company brief, show the conflict for my correction. Do not grant a sender or live channel yet.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the first target company.

Copy full prompt: [prompts.html#p1-authority](#)

Next: research the first target company (p1-one-source)

Section 3 of 5

Choose two target companies

- 1** Read both target websites.
- 2** Save facts with their sources.
- 3** Save your two-company list.

Two target briefs and TARGETS.md.

10 minutes

Research your first target company

5 min / Easy / Official target-company website. No paid API required.

- 1** Choose the first target website. Use a real company you want to sell to.
- 2** Save three useful facts. Record its product, buyers and a relevant current need.
- 3** Mark unsupported ideas as suggestions. A proposed campaign is not a known business problem.

You should have: One dated target brief

Check: Each target fact has its exact source excerpt and read date; The page idea is labeled as a suggestion; The opened domain belongs to the selected company. Any correction was confirmed by the owner

[Full prompt on the next page and at prompts.html#p1-one-source](#)

Prompt: Research your first target company

Before writing a target brief, open the supplied domain and confirm that it is the company I selected. If it is parked, for sale, redirected to an unrelated company or ambiguous, show the problem and ask me to confirm the correct domain. Do not silently substitute another company or use that page as buyer evidence.

Use the first target domain saved during setup.

Read its official website and my company brief.

Save company-motion/targets/ACTUAL-DOMAIN.md with its product, buyers and facts relevant to our offer. Use the actual domain in the path.

For each fact, include the source URL, exact supporting text and read date.

Keep ideas separate from facts. Do not invent revenue, spend, buying intent or a recent launch.

Show one sourced target fact and the page idea it supports.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the second target and save the target list.

Copy full prompt: [prompts.html#p1-one-source](#)

Next: research the second target and save the target list (p1-target-fit)

Save your two target companies

5 min / Easy / Two real target domains and browser access. No paid API required.

- 1** Read the saved target domains. Use the two companies from setup.
- 2** Research the second company. Save its facts and one supported fit reason.
- 3** Save the two-company list. Keep uncertain fit visible for review.

You should have: Two reviewed target briefs and company-motion/TARGETS.md

Check: Each company has one supported reason for the page; The opened domain belongs to the selected company. Any correction was confirmed by the owner

Full prompt on the next page and at [prompts.html#p1-target-fit](#)

Prompt: Save your two target companies

Before writing a target brief, open the supplied domain and confirm that it is the company I selected. If it is parked, for sale, redirected to an unrelated company or ambiguous, show the problem and ask me to confirm the correct domain. Do not silently substitute another company or use that page as buyer evidence.

Read the two target domains saved during setup.

Research the second company from its official sources and save its target brief.

Save company-motion/TARGETS.md with both actual domains, products, buyers and one sourced reason our offer fits each.

Keep uncertain fit marked for review. Company fit supports a page idea, not eligibility for a gift or demo incentive. Use company and public professional facts, not private personal traits. This list is page-building input, not permission to contact a person.

Show both companies plainly, one row each.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: build the first account page.

Copy full prompt: [prompts.html#p1-target-fit](#)

Next: build the first account page (p1-build-page)

Zuora: show useful ideas before asking for time

1 Name the buyer

2 Show useful ideas

3 Give a clear next step

Section 4 of 5

Build and check your first page

- 1** Create your first HTML page.
- 2** Check every claim against its source.
- 3** Open it on desktop and phone.

First HTML page and PAGE-REVIEW.md.

20 minutes

Build the page for your first target

10 min / Easy / Codex file/browser access and the two saved briefs. No API credits.

- 1** Copy the page prompt. Codex reads the two saved briefs.
- 2** Open the generated page. View the HTML in your browser.
- 3** Check the headline and offer. They must refer to the correct seller and buyer.

You should have: A real HTML page and source notes

Check: The page opens; The seller, target and next step are correct; No unsupported proof appears; The exact account page opens in the local HTTP preview and is visually checked

Full prompt on the next page and at [prompts.html#p1-build-page](#)

Prompt: Build the page for your first target

For browser review, use a local HTTP preview bound to 127.0.0.1. Serve only a dedicated folder containing this page and its required public assets, never the whole workshop or private files. Open the exact HTTP URL in the browser and view the page. If this browser cannot reach the preview, name the actual limitation and offer an existing app preview or manual browser check. A local preview is supported; do not call localhost prohibited. Keep source and claim checks separate from the browser check. After visual review, stop the preview process you started. If the attendee still needs it for review, record its actual process ID and exact cleanup command in company-motion/PAGE-REVIEW.md. Do not stop another application's server.

Build company-motion/pages/ACTUAL-DOMAIN/index.html for the first target using our company brief and its target brief.

Make one standalone responsive HTML file with styles, scripts and required graphics inside it.

Use our actual brand, one buyer-specific idea, our actual offer, supported proof and our real next-step link.

Keep suggestions distinct from facts. Do not invent a testimonial, logo, demo length, result or recent launch.

If proof is weak, use the supported product description or omit that proof block.

Save claim/source notes beside the page and open the actual file in a browser.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop. Next: check every claim and review desktop and phone layouts.

Use an unused port. If it is occupied, choose another port and report the exact URL. Never reuse an unrelated server. Record whether the phone check used device emulation, a real phone or a resized window. A resized window alone is a narrow-layout check, not proof of mobile-device behavior.

Copy full prompt: [prompts.html#p1-build-page](#)

Next: check every claim and review desktop and phone layouts (p1-page-review)

Check every claim. Then check the page layout.

10 min / Easy / Browser and generated HTML. No paid API required.

- 1** Read each factual claim.
- 2** Remove unsupported promises.
- 3** Check desktop and phone.
- 4** Open the next-step link.

You should have: Reviewed page plus company-motion/PAGE-REVIEW.md

Check: Every factual claim has exact supporting text or is removed; Measured innerWidth matches the recorded viewport; Phone overflow is measured inside that viewport; Failed checks are rerun after repair; The exact account page opens in the local HTTP preview and is visually checked

[Full prompt on the next page and at prompts.html#p1-page-review](#)

Prompt: Check every claim. Then check the page layout.

Open prompts.html

Find "Check every claim. Then check the page layout.". Click Copy prompt.

Paste it into the local Claude Code or Codex project you opened for this workshop.

The copy source includes the full instructions. This slide contains no partial prompt.

Copy full prompt: [prompts.html#p1-page-review](#)

Next: save the checked page method as a skill (p1-save-skill)

Section 5 of 5

Save the skill. Build page two.

- 1** Save the page instructions as a skill.
- 2** Use it for the second company.
- 3** Check both pages and saved files.

SKILL.md, second page and completed file check.

24 minutes + 30 minutes for individual help

Save your page-building instructions as a skill

6 min / Easy / Reviewed first page and source notes. No API credits.

- 1** Copy the skill prompt. Use your checked page and source notes.
- 2** Read the saved SKILL.md. It must say what to read, build and check.
- 3** Keep company-motion/skills/account-page/SKILL.md. The next prompt reads this file by its path.

You should have: company-motion/skills/account-page/SKILL.md

Check: The skill names inputs, output and checks; A missing source has a defined response; The saved skill can be read by its exact file path; Frontmatter name/description and Inputs, Steps, Output and Checks are present without an extra installation

Full prompt on the next page and at [prompts.html#p1-save-skill](#)

Prompt: Save your page-building instructions as a skill

Create company-motion/skills/account-page/SKILL.md from the method that passed review.

Include the required company and target facts, standalone HTML output, source ledger, missing-proof rule, real next-step link and measured desktop/phone checks. Start the file with simple frontmatter: name: account-page and a one-line description. Use sections Inputs, Steps, Output and Checks. Read the saved file and check those fields and headings with local file tools or the Python standard library. No global validator, plugin installation or PyYAML package is needed.

Use the reviewed first page as the example. Make the instructions usable in a fresh local agent session.

Require each factual claim to have exact source support. Keep unsupported facts out.

Show the complete saved skill. Tell me that the next prompt reads company-motion/skills/account-page/SKILL.md directly. No slash command or skill installation is needed.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: use that skill for the second target.

Copy full prompt: [prompts.html#p1-save-skill](#)

Next: use that skill for the second target (p1-repeat)

Use the skill for your second target

8 min / Easy / Saved account-page skill and second target brief. No paid API required.

- 1** Copy the next prompt. It reads the saved SKILL.md file
- 2** Open both pages. Compare the fact, headline and campaign idea
- 3** Save the result. Keep the first page unchanged

You should have: Second reviewed page and company-motion/SKILL-TEST.md

Check: Each page addresses its own buyer; The first page remains intact; The saved skill produced both outputs; The exact account page opens in the local HTTP preview and is visually checked; The second page changes a sourced target fact, the headline and the campaign idea, not just the company name

[Full prompt on the next page and at prompts.html#p1-repeat](#)

Prompt: Use the skill for your second target

Open prompts.html

Find "Use the skill for your second target". Click Copy prompt.

Paste it into the local Claude Code or Codex project you opened for this workshop.

The copy source includes the full instructions. This slide contains no partial prompt.

Copy full prompt: `prompts.html#p1-repeat`

Next: check the Part 1 files after the break (p1-checkpoint)

Save your pages. Take five minutes.

Save both pages. Leave the project open. Return in five minutes.

Your agent can wait. Coffee cannot.

Check your files. Repair only a failed check.

5 min / Easy / Your generated files and actual browser results. No new credits.

- 1** Copy the checkpoint prompt. Your agent opens each required file.
- 2** Repair a failed check, if one exists. If all checks passed, skip repair.
- 3** Read PROGRESS.md. Check the result and your next task.

You should have: PROGRESS.md with actual paths and passed or missing checks

Check: Required files are actually opened; Missing authority/instruction files can be repaired in place; Created, reviewed and published remain separate labels; An all-pass result skips repair and is recorded as complete

Full prompt on the next page and at [prompts.html#p1-checkpoint](#)

Prompt: Check your files. Repair only a failed check.

Open our company brief, setup receipt, company-motion/AUTHORITY.md, company-motion/AGENTS.md, target list, two target briefs, two pages, page review, saved skill and skill test.

If company-motion/AUTHORITY.md or company-motion/AGENTS.md is missing, rerun bootstrap with the existing company brief. Preserve all working outputs and history.

Append actual paths and passed or missing checks to company-motion/PROGRESS.md.

Keep created, reviewed and published separate. If a check failed, repair the first actual local issue and rerun that check. If every required check passes, write Part 1 complete and skip repair. Do not invent an error or manufacture extra work.

Name one exact next action for each remaining gap.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: use individual help for a real failed check, or save your completed project and register for the next workshop.

Copy full prompt: [prompts.html#p1-checkpoint](#)

Next: use help for a real gap, or save your completed project (p1-help)

Individual help, if you need it

30 min / Help / Codex and your workshop project.

- 1** Open PROGRESS.md. Check for a real unfinished item
- 2** If one exists, copy that task's repair prompt
- 3** If all checks passed, save your work. No repair needed

You should have: A repaired actual gap, or a saved all-pass completion record

Check: A real failed check is rerun, or an all-pass result skips repair

Full prompt on the next page and at [prompts.html#p1-help](#)

Prompt: Individual help, if you need it

Read company-motion/PROGRESS.md. If all required Part 1 checks already pass, record Part 1 complete, name the saved brief, both pages and skill, then stop. Do not invent a failed check. Otherwise find the first real unfinished Part 1 check.

Repair that local cause in this same project. Preserve working pages, source notes and the saved skill.

Rerun its success check and update company-motion/PROGRESS.md.

If only phone review is missing, show the exact manual device-mode or phone check instead of inventing a pass.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: save your project and register for the next workshop.

Copy full prompt: [prompts.html#p1-help](#)

Next: save your project and register for the next workshop (p1-before-part2)

Keep your project. Join the next workshop.

After class

Keep this same project.

Register using the QR code.

Before Part 2, confirm that you can authorize your own company email.
