

metadata.

Build your own Agentic GTM

Part 1

Build two pages for your target companies.

Gil Allouche
CEO, Metadata

Booklet, full prompts and starter code included.

This is how I built Metadata's GTM motion

93

Demo requests

64

Booked demos

34

Completed demos

Company totals since August 17, measured September 30, 2026. This workflow's share is unverified.

First instruction. Run this in Codex, Claude Code or your terminal.

```
git clone https://github.com/f-o-x11/agent-gtm-workshop.git
```

Open the folder in local Codex or Claude Code. Keep the booklet and prompts.html open.

The workflow I run at Metadata

Today: create the account page. Save the instructions. Use them for a second company.

I'm Gil. I run Metadata.

Gil Allouche

Founder and CEO, Metadata.io

Software engineer turned growth marketer. Now building autonomous AI products.

\$50M

Raised for Metadata

\$15M ARR

Built from zero

Zuora: one page and two message drafts

EMAIL DRAFT / Not sent

May I send you campaign ideas for reaching Zuora's accounting, billing operations and finance systems buyers?

New workshop draft. No send claimed.

GIFT INVITATION DRAFT

A thank-you gift with a campaign-planning demo for Zuora.

Not sent. Value, recipient and terms not selected.

Zuora / Actual account page

Build these files for your own company

2. Set up your company

Company brief

3. Choose two companies

Two target briefs

4. Build and check page one

Reviewed HTML page

5. Save the skill. Build page two.

Saved instructions + second page

Use your own company and targets. No API keys needed for Part 1.

Open [Participant-Booklet.pdf](#) for instructions. Open [prompts.html](#) to copy each full prompt.

Section 2 of 5

Set up your company

- 1** Open your cloned project.
- 2** Paste the startup prompt.
- 3** Review the company brief.

COMPANY.md, saved setup and local rules.

24 minutes

Open the cloned folder. Build your company brief.

12 min / Easy / Local Codex or Claude Code; file and web access. No API credits.

- 1** Open agentic-gtm-workshop in local Codex or Claude Code.
- 2** Open Participant-Booklet.pdf and prompts.html.
- 3** Copy the full startup prompt. Replace its five inputs.
- 4** Paste into your local agent. Review COMPANY.md when it stops.

You should have: COMPANY.md, SETUP.md, AUTHORITY.md and AGENTS.md

Check: Setup found a supported Python version; Sending and spending are paused; The agent stops and names the next task

Full prompt on the next page and at [prompts.html#p1-install](#)

Prompt: Open the cloned folder. Build your company brief.

Help me build my company's GTM workflow one step at a time.

Website: [YOUR_COMPANY_WEBSITE]

Buyer segment: [BUYER_SEGMENT]

Offer: [COLD_OFFER]

Targets: [TARGET_1_DOMAIN], [TARGET_2_DOMAIN]

I have cloned agentic-gtm-workshop and opened it as this local project. Read README.md, AGENTS.md and START-HERE.md. If an input is blank, ask only for what official sources cannot supply. Suggest real targets for my confirmation if needed.

Use this workshop folder as my local project. Keep runtime in code/ and outputs in company-motion/. Run commands from code/.

Read my official website and save company-motion/COMPANY.md with sourced facts, the segment, offer, proof and actual next-step link. Ask only for missing facts. If the site blocks access, use official text I paste.

After company-motion/COMPANY.md exists, run from code/:

```
python3 -B gtm.py bootstrap --company-brief ../company-motion/COMPANY.md
```

Use its saved verified Python executable for later commands and standalone scripts.

If Python needs installation, name the official installer and stop there. Do not install Homebrew.

Read company-motion/AUTHORITY.md and company-motion/AGENTS.md. Keep outreach and spending paused.

Save both target domains and the actual bootstrap result in company-motion/SETUP.md. Append the completed step, actual file paths, checks and next task to company-motion/PROGRESS.md. Do not run later exercises.

Show the output and success check. Stop. Next: review your company brief.

Copy full prompt: [prompts.html#p1-install](#)

Next: review your company brief (p1-company)

Check your company facts, buyers and offer

8 min / Easy / Codex web access and your official website. No paid API required.

- 1** Read COMPANY.md. Check the buyer, offer and next-step link.
- 2** Open its proof sources. Resolve conflicting numbers or leave them out.
- 3** Confirm the brief. Use it for both account pages.

You should have: company-motion/COMPANY.md with sourced company facts

Check: Every proof claim has a supporting source; Buyer segment and offer match your answers; Conflicting website numbers are flagged, not silently selected

Full prompt on the next page and at [prompts.html#p1-company](#)

Prompt: Check your company facts, buyers and offer

Review company-motion/COMPANY.md with me.

Show the buyer segment, offer, next-step link and the source behind each proof claim.

If the website has conflicting numbers, show both URLs and exact excerpts. Do not choose a number without support.

Ask at most two short questions for missing company facts. Keep unsupported claims out of the brief.

Save my corrections and preserve the source URLs and read dates.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: review the operating instructions.

Copy full prompt: [prompts.html#p1-company](#)

Next: review the operating instructions (p1-authority)

Check the saved rules. Keep sending paused.

4 min / Easy / Prepared bootstrap and your saved company brief. No API.

- 1** Open AUTHORITY.md and AGENTS.md. Your local rules and sending limits.
- 2** Confirm sending and spending are paused
- 3** Ask your agent to repair either missing file. Keep the existing company brief.

You should have: Present, readable AUTHORITY.md and AGENTS.md

Check: Both files exist; No outreach, sender, spend or country authority is invented

Full prompt on the next page and at [prompts.html#p1-authority](#)

Prompt: Check the saved rules. Keep sending paused.

Open company-motion/AUTHORITY.md and company-motion/AGENTS.md.

If either is missing, rerun:

```
python3 -B gtm.py bootstrap --company-brief ../company-motion/COMPANY.md
```

Preserve my existing facts, instructions and history.

Show the company name, one-step-at-a-time rule, and paused outreach and spending rules.

If either file conflicts with my company brief, show the conflict for my correction. Do not grant a sender or live channel yet.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the first target company.

Copy full prompt: [prompts.html#p1-authority](#)

Next: research the first target company (p1-one-source)

Section 3 of 5

Choose two target companies

- 1** Read both target websites.
- 2** Save facts with their sources.
- 3** Save your two-company list.

Two target briefs and TARGETS.md.

10 minutes

Research your first target company

5 min / Easy / Official target-company website. No paid API required.

- 1** Choose the first target website. Use a real company you want to sell to.
- 2** Save three useful facts. Record its product, buyers and a relevant current need.
- 3** Mark unsupported ideas as suggestions. A proposed campaign is not a known business problem.

You should have: One dated target brief

Check: Each target fact has its exact source excerpt and read date; The page idea is labeled as a suggestion

Full prompt on the next page and at prompts.html#p1-one-source

Prompt: Research your first target company

Use the first target domain saved during setup.

Read its official website and my company brief.

Save company-motion/targets/ACTUAL-DOMAIN.md with its product, buyers and facts relevant to our offer. Use the actual domain in the path.

For each fact, include the source URL, exact supporting text and read date.

Keep ideas separate from facts. Do not invent revenue, spend, buying intent or a recent launch.

Show one sourced target fact and the page idea it supports.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the second target and save the target list.

Copy full prompt: [prompts.html#p1-one-source](#)

Next: research the second target and save the target list (p1-target-fit)

Save your two target companies

5 min / Easy / Two real target domains and browser access. No paid API required.

- 1** Read the saved target domains. Use the two companies from setup.
- 2** Research the second company. Save its facts and one supported fit reason.
- 3** Save the two-company list. Keep uncertain fit visible for review.

You should have: Two reviewed target briefs and company-motion/TARGETS.md

Check: Each company has one supported reason for the page

Full prompt on the next page and at [prompts.html#p1-target-fit](#)

Prompt: Save your two target companies

Read the two target domains saved during setup.

Research the second company from its official sources and save its target brief.

Save company-motion/TARGETS.md with both actual domains, products, buyers and one sourced reason our offer fits each.

Keep uncertain fit marked for review. This list is page-building input, not permission to contact a person.

Show both companies plainly, one row each.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: build the first account page.

Copy full prompt: [prompts.html#p1-target-fit](#)

Next: build the first account page (p1-build-page)

Zuora: show useful ideas before asking for time

1 Name the buyer

2 Show useful ideas

3 Give a clear next step

Section 4 of 5

Build and check your first page

- 1** Create your first HTML page.
- 2** Check every claim against its source.
- 3** Open it on desktop and phone.

First HTML page and PAGE-REVIEW.md.

20 minutes

Build the page for your first target

10 min / Easy / Codex file/browser access and the two saved briefs. No API credits.

- 1** Copy the page prompt. Codex reads the two saved briefs.
- 2** Open the generated page. View the HTML in your browser.
- 3** Check the headline and offer. They must refer to the correct seller and buyer.

You should have: A real HTML page and source notes

Check: The page opens; The seller, target and next step are correct; No unsupported proof appears

Full prompt on the next page and at [prompts.html#p1-build-page](#)

Prompt: Build the page for your first target

Build `company-motion/pages/ACTUAL-DOMAIN/index.html` for the first target using our company brief and its target brief.

Make one standalone responsive HTML file with styles, scripts and required graphics inside it.

Use our actual brand, one buyer-specific idea, our actual offer, supported proof and our real next-step link.

Keep suggestions distinct from facts. Do not invent a testimonial, logo, demo length, result or recent launch.

If proof is weak, use the supported product description or omit that proof block.

Save claim/source notes beside the page and open the actual file in a browser.

If the browser blocks a local file URL, start a local HTTP preview on an unused 127.0.0.1 port. Serve only this page folder and its public assets. Open the page through that preview, then stop the preview when the browser checks are complete.

Append this step, actual artifact, check and next task to `company-motion/PROGRESS.md`. Show the output. Stop.

Next: check every claim and review desktop and phone layouts.

Copy full prompt: [prompts.html#p1-build-page](#)

Next: check every claim and review desktop and phone layouts (p1-page-review)

Check every claim. Then check the page layout.

10 min / Easy / Browser and generated HTML. No paid API required.

- 1** Read each factual claim.
- 2** Remove unsupported promises.
- 3** Check desktop and phone.
- 4** Open the next-step link.

You should have: Reviewed page plus company-motion/PAGE-REVIEW.md

Check: Every factual claim has exact supporting text or is removed; Measured innerWidth matches the recorded viewport; Phone overflow is measured inside that viewport; Failed checks are rerun after repair

Full prompt on the next page and at [prompts.html#p1-page-review](#)

Prompt: Check every claim. Then check the page layout.

Review every factual claim in the saved HTML, including headings, buttons, captions and footer.

Save a claim ledger with the claim, exact source URL and supporting excerpt. Remove or rewrite unsupported demo length, results, testimonials and recency claims. Suggestions must be labeled.

Check the page in actual browser viewports at 1440 x 900 and 390 x 844. Read `window.innerWidth` and `window.innerHeight` before checking overflow; resizing a Mac window alone is not proof of the viewport.

If the browser cannot reach 390 pixels, record phone review as unverified and give a device-mode or phone check. Do not report false clipping.

Test the next-step link. Repair failures and rerun them.

Save `company-motion/PAGE-REVIEW.md` with the claim ledger, measured viewport sizes, screenshots and unresolved checks.

If the browser blocks a local file URL, start a local HTTP preview on an unused 127.0.0.1 port. Serve only this page folder and its public assets. Open the page through that preview, then stop the preview when the browser checks are complete.

Append this step, actual artifact, check and next task to `company-motion/PROGRESS.md`. Show the output. Stop. Next: save the checked page method as a skill.

Copy full prompt: [prompts.html#p1-page-review](#)

Next: save the checked page method as a skill (`p1-save-skill`)

Section 5 of 5

Save the skill. Build page two.

- 1** Save the page instructions as a skill.
- 2** Use it for the second company.
- 3** Check both pages and saved files.

SKILL.md, second page and completed file check.

24 minutes + 30 minutes for individual help

Save your page-building instructions as a skill

6 min / Easy / Reviewed first page and source notes. No API credits.

- 1** Copy the skill prompt. Use your checked page and source notes.
- 2** Read the saved SKILL.md. It must say what to read, build and check.
- 3** Use these instructions for the next page

You should have: company-motion/skills/account-page/SKILL.md

Check: The skill names inputs, output and checks; A missing source has a defined response

Full prompt on the next page and at [prompts.html#p1-save-skill](#)

Prompt: Save your page-building instructions as a skill

Create company-motion/skills/account-page/SKILL.md from the method that passed review. Include the required company and target facts, standalone HTML output, source ledger, missing-proof rule, real next-step link and measured desktop/phone checks. Use the reviewed first page as the example. Make the instructions usable in a fresh local agent session. Require each factual claim to have exact source support. Keep unsupported facts out. Show the complete saved skill. Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop. Next: use that skill for the second target.

Copy full prompt: [prompts.html#p1-save-skill](#)

Next: use that skill for the second target (p1-repeat)

Use the skill for your second target

8 min / Easy / Saved account-page skill and second target brief. No paid API required.

- 1** Run the account-page skill. Use the second saved target brief.
- 2** Open both pages. Compare buyer names and ideas.
- 3** Save the repeat result. Keep the first page intact.

You should have: Second reviewed page and company-motion/SKILL-TEST.md

Check: Each page addresses its own buyer; The first page remains intact; The saved skill produced both outputs

Full prompt on the next page and at [prompts.html#p1-repeat](#)

Prompt: Use the skill for your second target

Use the saved account-page skill and the second target brief to build the second page.

Keep the first page unchanged.

Run the skill's full claim/source review and measured desktop/phone checks. A missing browser check stays unverified.

Show what changed between the two targets. Remove facts or generic copy carried over from the first company.

Save company-motion/SKILL-TEST.md with both page paths, review evidence and remaining issues.

If the browser blocks a local file URL, start a local HTTP preview on an unused 127.0.0.1 port. Serve only this page folder and its public assets. Open the page through that preview, then stop the preview when the browser checks are complete.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: check the Part 1 files after the break.

Copy full prompt: [prompts.html#p1-repeat](#)

Next: check the Part 1 files after the break (p1-checkpoint)

Save your pages. Take five minutes.

Save both pages. Leave the project open. Return in five minutes.

Your agent can wait. Coffee cannot.

Check the files. Fix anything missing.

5 min / Easy / Your generated files and actual browser results. No new credits.

- 1** Copy the checkpoint prompt. Your agent opens each required file.
- 2** Fix the first failed check. Keep both pages and the saved skill.
- 3** Read PROGRESS.md. Check the result and your next task.

You should have: PROGRESS.md with actual paths and passed or missing checks

Check: Required files are actually opened; Missing authority/instruction files can be repaired in place; Created, reviewed and published remain separate labels

Full prompt on the next page and at [prompts.html#p1-checkpoint](#)

Prompt: Check the files. Fix anything missing.

Open our company brief, setup receipt, company-motion/AUTHORITY.md, company-motion/AGENTS.md, target list, two target briefs, two pages, page review, saved skill and skill test.

If company-motion/AUTHORITY.md or company-motion/AGENTS.md is missing, rerun bootstrap with the existing company brief. Preserve all working outputs and history.

Append actual paths and passed or missing checks to company-motion/PROGRESS.md.

Keep created, reviewed and published separate. Repair the first available local issue and rerun its check.

Name one exact next action for each remaining gap.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: finish the first remaining issue with individual help.

Copy full prompt: [prompts.html#p1-checkpoint](#)

Next: finish the first remaining issue with individual help (p1-help)

Fix your first unfinished task

30 min / Help / Codex and your workshop project.

- 1** Open PROGRESS.md. Find the first unfinished check
- 2** Copy that task's repair prompt from prompts.html
- 3** Add your error. Rerun the check. Save the result

You should have: One repaired task and updated progress

Check: The previously failed check is rerun

Full prompt on the next page and at [prompts.html#p1-help](#)

Prompt: Fix your first unfinished task

Read company-motion/PROGRESS.md and find the first unfinished Part 1 check.

Repair that local cause in this same project. Preserve working pages, source notes and the saved skill.

Rerun its success check and update company-motion/PROGRESS.md.

If only phone review is missing, show the exact manual device-mode or phone check instead of inventing a pass.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: prepare the single email connection before Part 2.

Copy full prompt: [prompts.html#p1-help](#)

Next: prepare the single email connection before Part 2 (p1-before-part2)

Register for Parts 2 and 3. Prepare your email.

After class

Register using the QR code.

Open PREWORK.md in your cloned project.

Connect your own Google email and calendar.

Bring customer and opt-out exclusions.

Workshop 2

Register for Part 2

Workshop 3

Register for Part 3

Prompt: Register for Parts 2 and 3. Prepare your email.

Read API-CONNECTIONS.html, API-CONNECTIONS.md and SETUP-SEQUENCE.md for the single email channel. Prepare my own sender, primary calendar, permitted countries and current customer/deal/opt-out exclusions. Follow the Google Cloud sign-in guide. It must initialize this fresh email configuration from code/ using python3 -B gtm.py init --config and the actual private path before treating email setup as ready; bootstrap alone is local file setup. Use the project launcher and the actual private client-file path. Record the authenticated sender and calendar; name any Workspace-admin blocker.

Prepare ten distinct target domains and current buyer contacts plus my own self-test address.

Read the actual ZeroBounce balance and show the validation cost. Ask for my bounded paid-validation approval before spending credits. Keep original pending request IDs.

Save company-motion/CONNECTION-CHECK.md with each actual result or blocker. Keep outreach paused.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: keep this project and prepare your email before Part 2.

Copy full prompt: [prompts.html#p1-before-part2](#)
