

This is how I built Metadata's GTM motion

93

Demo requests

64

Booked demos

34

Completed demos

Metadata company-wide dashboard, September 30. Since August 17. These counts do not establish engine attribution.

Engine pilot, September 16: 10 emails matched Gmail Sent. 10 repeat attempts blocked.

Gil Allouche, CEO of Metadata. You will build this workflow for your company.

A real page, email and gift

The screenshot shows a landing page for a campaign by Metadata for Zuora Inc. The page has a light beige background. At the top left is the Metadata logo. At the top right, it says "A campaign brief for Zuora Inc" and "zuora.com". Below the logo, it says "METADATA x ZUORA INC". The main headline is "Zuora Inc, Reach the team behind every revenue decision". Below this, it says "See a Metadata campaign-planning demo built around Zuora's quote-to-cash buyers: accounting, billing operations, and finance systems." There are two buttons: "Audience → creative → pipeline" and "Your budget. Your approvals." Below these, it says "IN GOOD COMPANY" and lists logos for Zoom, Notion, reddit, Pinterest, LogicMonitor, and Monotype. At the bottom, there is a photo of hands putting puzzle pieces together. On the right side, there is a white box with a blue arrow pointing to it. Inside the box, it says "Let's make it concrete." followed by "Request your personalized Metadata demo. Choose a time after submitting the form." Below this is a "Work Email" field with the placeholder "you@company.com" and a red "Request a demo" button. At the bottom of the box, it says "By submitting, you agree to our [Privacy Policy](#). We'll never spam you." Below this, it says "What we'll work through" and lists three items: "A target audience and campaign offer", "Creative ideas and a first experiment", and "Budget controls and pipeline measurement".

Let's make it concrete.

Request your personalized Metadata demo. Choose a time after submitting the form.

Work Email

you@company.com

Request a demo

By submitting, you agree to our [Privacy Policy](#). We'll never spam you.

What we'll work through

- A target audience and campaign offer
- Creative ideas and a first experiment
- Budget controls and pipeline measurement

Metadata built a page for Zuora, sent an email to Forum One and sent a gift invitation to Datarails. These are different examples.

What your workflow does

Paused, excluded or uncertain: hold the action and read the existing provider record.

The working project is already prepared

Project instructions and command

README.md
AGENTS.md
gtm.py

Configuration

policy.json
schema.sql

Saved records

gtm.sqlite

Core workflow

database.py
scheduler.py
checks.py
validation.py
http_client.py
research.py
assets.py

Channels

email.py
gifts.py
social.py
meetings.py

Import, checks and migration receipt

import_v4.py
focused_checks.py
migration_receipt.json

Actual v5 source: 20 files. Accounts, messages and provider results are rows in one database.

The four steps I used

August 7 foundation. Claude Code v1/v2. Codex v3. Kimi handoff. Codex v4. Local v5 on October 4 to 5.

Today you build two pages and save the job

Each person builds for their own company. Finish with two account pages, a reusable page skill and a saved project you can continue after class.

COMPANY.md

TARGETS.md

First account page

Saved page skill

Second account page

Chapter 2 of 5

Start your company project

Company brief, paused instructions and verified local setup.

24 guided minutes

Open the next full prompt. Review the result before moving on.

Clone the project. Paste one prompt.

12 min / Easy / Local Codex or Claude Code; file and web access. No API credits.

```
git clone https://github.com/f-o-x11/agentic-gtm-workshop.git
```

- 1 Clone the workshop.
- 2 Open agentic-gtm-workshop.
- 3 Copy the full startup prompt.
- 4 Review your company brief.

You should have: COMPANY.md, SETUP.md, AUTHORITY.md, AGENTS.md and saved interpreter receipt.

Check: Company brief exists before bootstrap.; Compatible Python path/version is actually verified.; Outreach and spending remain paused.; Agent stops after setup and names the next step.

Full prompt on the next page and at prompts.html#p1-install

Prompt: Clone the project. Paste one prompt.

Help me build my company's GTM workflow one step at a time.

Website: [YOUR_COMPANY_WEBSITE]

Buyer segment: [BUYER_SEGMENT]

Offer: [COLD_OFFER]

Targets: [TARGET_1_DOMAIN], [TARGET_2_DOMAIN]

I have cloned agentic-gtm-workshop and opened it as this local project. Read README.md, AGENTS.md and START-HERE.md. If an input is blank, ask only for what official sources cannot supply. Suggest real targets for my confirmation if needed.

Use this workshop folder as my local project. Keep runtime in code/ and outputs in company-motion/. Run commands from code/.

Read my official website and save company-motion/COMPANY.md with sourced facts, the segment, offer, proof and actual next-step link. Ask only for missing facts. If the site blocks access, use official text I paste.

After company-motion/COMPANY.md exists, run from code/:

```
python3 -B gtm.py bootstrap --company-brief ../company-motion/COMPANY.md
```

Use its saved verified Python executable for later commands and standalone scripts.

If Python needs installation, name the official installer and stop there. Do not install Homebrew.

Read company-motion/AUTHORITY.md and company-motion/AGENTS.md. Keep outreach and spending paused.

Save both target domains and the actual bootstrap result in company-motion/SETUP.md. Append the completed step, actual file paths, checks and next task to company-motion/PROGRESS.md. Do not run later exercises.

Show the output and success check. Stop. Next: review your company brief.

Copy full prompt: [prompts.html#p1-install](#)

Next: review your company brief (p1-company)

Six terms used in these exercises

Skill

Saved instructions for one repeatable job.

Execution flow

The order of jobs and the next-action rules.

Provider receipt

The service's actual ID and result for an action.

Target account

A company you want to sell to.

Self-test / canary

One approved email sent to your own sender.

Hold

Keep the action stopped until a missing check passes.

Part 1 needs no API keys

You can finish the pages with your website and local agent. Add keys only when you connect a channel. Your own credentials stay in private local files.

Private key paths

Private configuration

Your recipient inputs

**Private working
database**

Review what your agent learned about your company

8 min / Easy / Codex web access and your official website. No paid API required.

- 1 Read COMPANY.md. Check the buyer, offer and next-step link.
- 2 Open its proof sources. Resolve conflicting numbers or leave them out.
- 3 Confirm the brief. Use it for both account pages.

You should have: company-motion/COMPANY.md with sourced company facts.

Check: Every proof claim has a supporting source.; Buyer segment and offer match your answers.; Conflicting website numbers are flagged, not silently selected.

Full prompt on the next page and at [prompts.html#p1-company](#)

Prompt: Review what your agent learned about your company

Review company-motion/COMPANY.md with me.

Show the buyer segment, offer, next-step link and the source behind each proof claim.

If the website has conflicting numbers, show both URLs and exact excerpts. Do not choose a number without support.

Ask at most two short questions for missing company facts. Keep unsupported claims out of the brief.

Save my corrections and preserve the source URLs and read dates.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: review the operating instructions.

Copy full prompt: [prompts.html#p1-company](#)

Next: review the operating instructions (p1-authority)

Your project starts with outreach paused

4 min / Easy / Prepared bootstrap and your saved company brief. No API.

- 1 Open the two instruction files. Read the company facts and paused authority.
- 2 Repair a missing file. Rerun bootstrap. It preserves existing files.
- 3 Keep the project paused. No sender or paid channel is needed yet.

You should have: Present, readable AUTHORITY.md and AGENTS.md.

Check: Both files exist.; No outreach, sender, spend or country authority is invented.

Full prompt on the next page and at prompts.html#p1-authority

Prompt: Your project starts with outreach paused

Open company-motion/AUTHORITY.md and company-motion/AGENTS.md.

If either is missing, rerun:

```
python3 -B gtm.py bootstrap --company-brief ../company-motion/COMPANY.md
```

Preserve my existing facts, instructions and history.

Show the company name, one-step-at-a-time rule, and paused outreach and spending rules.

If either file conflicts with my company brief, show the conflict for my correction. Do not grant a sender or live channel yet.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the first target company.

Copy full prompt: [prompts.html#p1-authority](#)

Next: research the first target company (p1-one-source)

Chapter 3 of 5

Choose two target companies

Two source-backed target briefs and a saved target list.

10 guided minutes

Open the next full prompt. Review the result before moving on.

Research your first target company

5 min / Easy / Official target-company website. No paid API required.

- 1 Choose the first target website. Use a real company you want to sell to.
- 2 Save three useful facts. Record its product, buyers and a relevant current need.
- 3 Mark unsupported ideas as suggestions. A proposed campaign is not a known business problem.

You should have: One dated target brief.

Check: Each target fact has its exact source excerpt and read date.; The page idea is labeled as a suggestion.

Full prompt on the next page and at prompts.html#p1-one-source

Prompt: Research your first target company

Use the first target domain saved during setup.

Read its official website and my company brief.

Save company-motion/targets/ACTUAL-DOMAIN.md with its product, buyers and facts relevant to our offer. Use the actual domain in the path.

For each fact, include the source URL, exact supporting text and read date.

Keep ideas separate from facts. Do not invent revenue, spend, buying intent or a recent launch.

Show one sourced target fact and the page idea it supports.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: research the second target and save the target list.

Copy full prompt: [prompts.html#p1-one-source](#)

Next: research the second target and save the target list (p1-target-fit)

Save your two target companies

5 min / Easy / Two real target domains and browser access. No paid API required.

- 1 Read the saved target domains. Use the two companies from setup.
- 2 Research the second company. Save its facts and one supported fit reason.
- 3 Save the two-company list. Keep uncertain fit visible for review.

You should have: Two reviewed target briefs and company-motion/TARGETS.md.

Check: Each company has one supported reason for the page.

Full prompt on the next page and at [prompts.html#p1-target-fit](#)

Prompt: Save your two target companies

Read the two target domains saved during setup.

Research the second company from its official sources and save its target brief.

Save company-motion/TARGETS.md with both actual domains, products, buyers and one sourced reason our offer fits each.

Keep uncertain fit marked for review. This list is page-building input, not permission to contact a person.

Show both companies plainly, one row each.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: build the first account page.

Copy full prompt: [prompts.html#p1-target-fit](#)

Next: build the first account page (p1-build-page)

Zuora: show useful ideas before asking for time

metadata

A campaign brief for Zuora Inc
zuora.com

METADATA x ZUORA INC

Zuora Inc, Reach the team behind every revenue decision

See a Metadata campaign-planning demo built around Zuora's quote-to-cash buyers: accounting, billing operations, and finance systems.

Audience → creative → pipeline Your budget. Your approvals.

IN GOOD COMPANY

zoom Notion reddit

Pinterest LogicMonitor Monotype.

Let's make it concrete.

Request your personalized Metadata demo. Choose a time after submitting the form.

Work Email

you@company.com

Request a demo

By submitting, you agree to our [Privacy Policy](#). We'll never spam you.

What we'll work through

- A target audience and campaign offer
- Creative ideas and a first experiment
- Budget controls and pipeline measurement

The page gives Zuora campaign ideas. It shows the offer and a clear next step. Your page should do the same for your buyer.

Chapter 4 of 5

Build and check your first page

A reviewed page and a claim/source check.

20 guided minutes

Open the next full prompt. Review the result before moving on.

Build the page for your first target

10 min / Easy / Codex file/browser access and the two saved briefs. No API credits.

- 1 Copy the page prompt. Codex reads the two saved briefs.
- 2 Open the generated page. View the HTML in your browser.
- 3 Check the headline and offer. They must refer to the correct seller and buyer.

You should have: A real HTML page and source notes.

Check: The page opens.; The seller, target and next step are correct.; No unsupported proof appears.

Full prompt on the next page and at [prompts.html#p1-build-page](#)

Prompt: Build the page for your first target

Build company-motion/pages/ACTUAL-DOMAIN/index.html for the first target using our company brief and its target brief.

Make one standalone responsive HTML file with styles, scripts and required graphics inside it.

Use our actual brand, one buyer-specific idea, our actual offer, supported proof and our real next-step link.

Keep suggestions distinct from facts. Do not invent a testimonial, logo, demo length, result or recent launch.

If proof is weak, use the supported product description or omit that proof block.

Save claim/source notes beside the page and open the actual file in a browser.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: check every claim and review desktop and phone layouts.

Copy full prompt: [prompts.html#p1-build-page](#)

Next: check every claim and review desktop and phone layouts (p1-page-review)

Check every claim. Then check the page layout.

10 min / Easy / Browser and generated HTML. No paid API required.

- 1 Read each factual claim.
- 2 Remove unsupported promises.
- 3 Check desktop and phone.
- 4 Open the next-step link.

You should have: Reviewed page plus company-motion/PAGE-REVIEW.md.

Check: Every factual claim has exact supporting text or is removed.; Measured innerWidth matches the recorded viewport.; Phone overflow is measured inside that viewport.; Failed checks are rerun after repair.

Full prompt on the next page and at prompts.html#p1-page-review

Prompt: Check every claim. Then check the page layout.

Review every factual claim in the saved HTML, including headings, buttons, captions and footer. Save a claim ledger with the claim, exact source URL and supporting excerpt. Remove or rewrite unsupported demo length, results, testimonials and recency claims. Suggestions must be labeled. Check the page in actual browser viewports at 1440 x 900 and 390 x 844. Read `window.innerWidth` and `window.innerHeight` before checking overflow; resizing a Mac window alone is not proof of the viewport. If the browser cannot reach 390 pixels, record phone review as unverified and give a device-mode or phone check. Do not report false clipping. Test the next-step link. Repair failures and rerun them. Save `company-motion/PAGE-REVIEW.md` with the claim ledger, measured viewport sizes, screenshots and unresolved checks. Append this step, actual artifact, check and next task to `company-motion/PROGRESS.md`. Show the output. Stop. Next: save the checked page method as a skill.

Copy full prompt: [prompts.html#p1-page-review](#)

Next: save the checked page method as a skill (p1-save-skill)

Chapter 5 of 5

Save the skill and build page two

A reusable skill, second reviewed page and Part1 checkpoint.

24 guided minutes + 30 minutes for help

Open the next full prompt. Review the result before moving on.

STEP 1: save the page method as a skill

6 min / Easy / Reviewed first page and source notes. No API credits.

- 1 Copy the skill prompt. Use the reviewed page and source notes.
- 2 Read the saved SKILL.md. Check the required inputs and success checks.
- 3 Keep the prompt and result together. The next run should use the same method.

You should have: company-motion/skills/account-page/SKILL.md.

Check: The skill names inputs, output and checks.; A missing source has a defined response.

Full prompt on the next page and at prompts.html#p1-save-skill

Prompt: STEP 1: save the page method as a skill

Create company-motion/skills/account-page/SKILL.md from the method that passed review.
Include the required company and target facts, standalone HTML output, source ledger, missing-proof rule, real next-step link and measured desktop/phone checks.
Use the reviewed first page as the example. Make the instructions usable in a fresh local agent session.
Require each factual claim to have exact source support. Keep unsupported facts out.
Show the complete saved skill.
Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.
Next: use that skill for the second target.

Copy full prompt: [prompts.html#p1-save-skill](#)

Next: use that skill for the second target (p1-repeat)

Use the skill for your second target

8 min / Easy / Saved account-page skill and second target brief. No paid API required.

- 1 Run the account-page skill. Use the second saved target brief.
- 2 Open both pages. Compare buyer names and ideas.
- 3 Save the repeat result. Keep the first page intact.

You should have: Second reviewed page and company-motion/SKILL-TEST.md.

Check: Each page addresses its own buyer.; The first page remains intact.; The saved skill produced both outputs.

Full prompt on the next page and at [prompts.html#p1-repeat](#)

Prompt: Use the skill for your second target

Use the saved account-page skill and the second target brief to build the second page.
Keep the first page unchanged.
Run the skill's full claim/source review and measured desktop/phone checks. A missing browser check stays unverified.
Show what changed between the two targets. Remove facts or generic copy carried over from the first company.
Save company-motion/SKILL-TEST.md with both page paths, review evidence and remaining issues.
Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.
Next: check the Part 1 files after the break.

Copy full prompt: [prompts.html#p1-repeat](#)

Next: check the Part 1 files after the break (p1-checkpoint)

Coffee. Your agent has the notes.

Save both pages. Leave the project open. Return in five minutes.

Please do not make coffee your next automation dependency.

A page file is one useful result

A local page, a published page and a verified form submission are different results. Keep the label that your evidence supports.

HTML created

Browser reviewed

Published URL verified

**Form submission
verified**

Check your Part 1 files. Repair any missing setup.

01 Run the checkpoint prompt.

Codex opens each required file.

02 Repair the first missing check.

Preserve the working pages.

03 Save your next task.

Bring this same project to Part 2.

Your agent opens the required files. If setup skipped the instructions, bootstrap repairs them in the same project without losing your pages.

Prompt: Check your Part 1 files. Repair any missing setup.

Open our company brief, setup receipt, company-motion/AUTHORITY.md, company-motion/AGENTS.md, target list, two target briefs, two pages, page review, saved skill and skill test.

If company-motion/AUTHORITY.md or company-motion/AGENTS.md is missing, rerun bootstrap with the existing company brief. Preserve all working outputs and history.

Append actual paths and passed or missing checks to company-motion/PROGRESS.md.

Keep created, reviewed and published separate. Repair the first available local issue and rerun its check.

Name one exact next action for each remaining gap.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: finish the first remaining issue with individual help.

Copy full prompt: [prompts.html#p1-checkpoint](#)

Next: finish the first remaining issue with individual help (p1-help)

Finish your pages. Fix the first blocker.

Work individually. Open the repair prompt for the failed task. Gil helps with errors and unclear results.

Prompt: Finish your pages. Fix the first blocker.

Read company-motion/PROGRESS.md and find the first unfinished Part 1 check.

Repair that local cause in this same project. Preserve working pages, source notes and the saved skill.

Rerun its success check and update company-motion/PROGRESS.md.

If only phone review is missing, show the exact manual device-mode or phone check instead of inventing a pass.

Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.

Next: prepare the single email connection before Part 2.

Copy full prompt: [prompts.html#p1-help](#)

Next: prepare the single email connection before Part 2 (p1-before-part2)

Before Part 2: prepare one email channel

Required

Own Google sender and primary calendar

Completed Google authorization

Current customer, deal and opt-out exclusions

Eleven exact validated addresses

Permitted recipient-company countries

Workshop 2

<https://luma.com/jd8tm0ij>

Workshop 3

<https://luma.com/wucyo6fw>

Prompt: Before Part 2: prepare one email channel

Read PREWORK.md, API-CONNECTIONS.md and SETUP-SEQUENCE.md for the single email channel.
Prepare my own sender, primary calendar, permitted countries and current customer/deal/opt-out exclusions.
Follow the Google Cloud sign-in guide. It must initialize this fresh email configuration from code/ using python3 -B gtm.py init --config and the actual private path before treating email setup as ready; bootstrap alone is local file setup.
Use the project launcher and the actual private client-file path. Record the authenticated sender and calendar; name any Workspace-admin blocker.
Prepare ten distinct target domains and current buyer contacts plus my own self-test address.
Read the actual ZeroBounce balance and show the validation cost. Ask for my bounded paid-validation approval before spending credits. Keep original pending request IDs.
Save company-motion/CONNECTION-CHECK.md with each actual result or blocker. Keep outreach paused.
Append this step, actual artifact, check and next task to company-motion/PROGRESS.md. Show the output. Stop.
Next: open Part 2 and check your email prerequisites.

Copy full prompt: [prompts.html#p1-before-part2](#)

Next: open Part 2 and check your email prerequisites (p2-connect)
