Prepare before November 17.

Workshop: November 17, 2026, 11:00 a.m. to 1:00 p.m. EST, live on Zoom.

Start by November 3. Finish account setup by November 10. Recheck on November 16.

Bring your Part 1 project, company brief, saved page skill and ten target-company domains.

Live email needs your own Google mailbox/calendar, a desktop OAuth client, current buyer sources and ZeroBounce validation credits.

No extra model API key or MCP installation is required for the supplied Gmail lane.

Open PREP.html for all six complete prompts, the provider links and repairs.

Open the full preparation page

Connect Google.

1. Sign into your own Google Cloud project. Enable Gmail, Calendar and Sheets APIs.

2. Open Google Auth platform. Set up Branding and Audience for your organization; External testing needs your exact sender as a test user.

3. Clients > Create Client > Desktop app. Download your own JSON and keep it private.

4. Use the embedded connection prompt. The agent starts setup-google with the actual private file path.

5. Choose and authorize your exact sender. Review Gmail read/modify/send, Calendar read-only and Sheets read-only scopes.

6. Check the actual sender and calendar returned by the API.

Blocked consent needs your Workspace administrator. Keep local preparation going. Testing-mode tokens may expire after seven days; recheck before class.

Open the full preparation page

Save the validation key.

1. Sign into your own ZeroBounce account. Open API > API Keys.

2. Open your own Terminal. Use the code/ folder and saved-Python command supplied by the private-setup prompt.

3. Run ../save-api-key.py --provider zerobounce with that saved interpreter. Enter only the key at the hidden prompt.

4. Use the balance-check prompt. It reads your real balance without validating addresses.

Budget for unique addresses still needing validation, including your owned test. Eleven fresh addresses need eleven validation credits.

Private root: ~/.local/share/agentic-gtm/workshop-private/. Key: keys/zerobounce.key. No key values belong in the browser or agent chat.

Open the full preparation page

Bring the buyers. Run the check.

Prepare ten real companies and one buyer per company using existing CRM/export contacts or one approved contact finder.

For every person, save the current employer/role source and a sourced work email. Unknown or catch-all addresses stay held.

Bring current customers, open deals, opt-outs and other exclusions privately. Refresh them in class; do not fake fresh dates.

Run the prep check on November 16. It must name your sender, calendar read, real credit balance and each missing input.

Without account access, build the list, drafts, execution flow and skill. Record the missing connection; a preview is not a send.

Leave gifting, Gojiberry, page hosting and advertising accounts for Part 3.
